Please find below and/or attached an Office communication concerning this application or proceeding.

	Application No.	Applicant(s)		
Office Action Summary				
	09/603,698	ISHIKAWA ET AL.		
	Examiner	Art Unit		
The MAILING DATE of this communication ap	Sahera Halim	h the correspondence address		
Period for Reply	pears on the cover sneet with	n the correspondence address		
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). - Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). Status				
1) Responsive to communication(s) filed on 26.	June 2000 .			
_	nis action is non-final.			
3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is				
closed in accordance with the practice under <i>Ex parte Quayle</i> , 1935 C.D. 11, 453 O.G. 213. Disposition of Claims				
4) \boxtimes Claim(s) <u>1-14</u> is/are pending in the application	n.			
4a) Of the above claim(s) is/are withdrawn from consideration.				
5) Claim(s) is/are allowed.				
6)⊠ Claim(s) <u>1-14</u> is/are rejected.				
7) Claim(s) is/are objected to.				
8) Claim(s) are subject to restriction and/or election requirement.				
Application Papers				
9) The specification is objected to by the Examiner.				
10) The drawing(s) filed on is/are: a) accepted or b) objected to by the Examiner.				
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).				
11) The proposed drawing correction filed on is: a) approved b) disapproved by the Examiner. If approved, corrected drawings are required in reply to this Office action.				
12) The oath or declaration is objected to by the Examiner.				
Priority under 35 U.S.C. §§ 119 and 120				
13) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).				
a) ☐ All b) ☐ Some * c) ☐ None of:				
1. Certified copies of the priority documents have been received.				
2. Certified copies of the priority documents have been received in Application No				
3. Copies of the certified copies of the priority documents have been received in this National Stage				
application from the International Bureau (PCT Rule 17.2(a)). * See the attached detailed Office action for a list of the certified copies not received.				
14) Acknowledgment is made of a claim for domestic	c priority under 35 U.S.C. §	119(e) (to a provisional application).		
a) ☐ The translation of the foreign language provisional application has been received. 15)☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.				
Attachment(s)				
1) Notice of References Cited (PTO-892) 2) Notice of Draftsperson's Patent Drawing Review (PTO-948) 3) Information Disclosure Statement(s) (PTO-1449) Paper No(s)	5) Notice of Info	mmary (PTO-413) Paper No(s)		

Art Unit: 2157

DETAILED ACTION

1. Claims 1 - 14 have been examined.

Specification

2. The disclosure is objected to because it contains an embedded hyperlink and/or other form of browser-executable code on page 1, line 20. Applicant is required to delete the embedded hyperlink and/or other form of browser-executable code. See MPEP § 608.01.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112: The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the

subject matter which the applicant regards as his invention.

- 4. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 1 recites "a virtual device function a gateway", it is unclear what is meant by this limitation. It is interpreted as "a virtual device function as a gateway" for examination purposes.
- 5. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 1 (e) recites "a virtual-device-controller for providing said virtual device

Page 2

Art Unit: 2157

corresponding to the first device plugged-in with an IP identifier, for the second network accessing to said virtual device, responsive to information supplied from said first plug-in detector", it is unclear what is meant by this limitation. It is interpreted as "a virtual-device controller for providing said virtual device corresponding to the first device plugged-in with an IP identifier for the second network to have access to said virtual device in response to information supplied from said first plug-in detector", for examination purposes.

- 6. Claims 2, 5, and claim 6 recite the limitation "said controller". There is insufficient antecedent basis for this limitation in the claims. It is unclear whether "controller" is referring to "virtual-device-controller" or "address-correspondence-controller". The "controller" is interpreted as "virtual-device-controller" for examination purposes.
- Claims 2, 3, 4, 8, 9, 10, and 11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 2, line 11, claim 3, lines 7 and 11, claim 4, line 11, claim 9, line 12, claim 8, line 2, claim 9 (d-2), claim 10, line 9, and claim 11, line 10 of the claim have the limitation of "plugged-in the first network" or "plugged-in the second network". It is not understood what is meant by this limitation in the claims. For examination purposes it is understood as "plugged in".
- 8. Claims 4 and 11 recite the limitation "the first devices" in the claims. There is insufficient antecedent basis for this limitation in the claims. It is unclear whether "the first

devices" is meant to be "devices". It has been further treated as "devices" for examination purposes.

- 9. Claims 6 and 13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 6(i) and 13(i) have the limitation of "other cases than a case", it is unclear what is meant by this limitation. It is interpreted as "a case" for examination purposes.
- Claims 6 and 13 recite the limitation "the virtual device" in the claims 6(ii) and 13 (ii). Since 6(i) recite "... virtual device includes a virtual device.." and 13 (i) recites "... where the virtual device includes another virtual device..", it is unclear whether 6(ii) and 13(ii) are referring to the initial virtual device or the virtual device included in the virtual device. There is insufficient antecedent basis for this limitation in the claims. It is assumed that they are referring to the initial virtual device during examination.
- 11. Claim 4, line 7 recites the limitation "the virtual device" in the claim. Since claim 4 depends on claim 3 and claim recites ".. virtual device includes a virtual device...", it is unclear whether claim 4 is referring to the initial virtual device or the virtual device included in the virtual device. There is insufficient antecedent basis for this limitation in the claims. It is assumed is referring to the initial virtual device during examination.

Application/Control Number: 09/603,698 Page 5

Art Unit: 2157

12. Claims 5 and 6 recite the limitation " the device" in line 12 of claim 5 and line 10 of claim 6. There is insufficient antecedent basis for this limitation in the claim. It is interpreted as "the first device" for examination purposes.

- 13. Claim 14, recites the limitation "the message" in the claim. There is insufficient antecedent basis for this limitation in the claim. It is interpreted as "a message" for examination purposes.
- 14. Regarding claims 4-6, 11 and 12, the phrase "necessary" renders the claim indefinite because it is unclear whether the limitation(s) following the phrase are part of the claimed invention. See MPEP § 2173.05(d). It is unclear what is necessary information.

Claim Objections

15. Claims 6 and 14 are objected to because of the following informalities: Claim 6(s) recites "downlowder", it is assumed as "downloader". Claim 14, comprises the limitation of "both the commands", it is interpreted as "both of the commands". Appropriate correction is required.

Claim Rejections - 35 USC § 102

16. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 2157

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

- 17. Claims 1 7, 8, 11, and 14 are rejected under 35 U.S.C. 102(e) as being anticipated by Akatsu et al., U.S. Pat. No. 6,496,862 (hereinafter Akatsu).
- 18. Regarding claim 1, Akatsu teaches a gateway (GW) apparatus for communicating between network said GW apparatus comprising (figure 5 and abstract):
- (a) first message input/output means for sending and receiving a message to/from a first network (figure 5, col. 3, line 33 57);
- (b) second message input/output means for communicating a second network based on an internet protocol IP (figure 5, col. 3, line 33 57);
- (c) a first plug-in detector for detecting a plug-in of a first device to the first network (col. 14, line 66 col. 15, line 8);
- (d) a virtual device functioning a gateway for the first device plugged in the first network and a second device plugged in a second network to communicate with each other (Figure 5, Fig 9-12 and element 504);
- (e) a virtual-device-controller for providing said virtual device corresponding to the first, device plugged-in with an IP identifier, for the second network accessing to said virtual device, responsive to information supplied from said first plug-in detector (col.10, line 6 66, col. 12, line 16 44 and col. 13, line 1 col. 14, line 65);
- (f) a pseudo-address generator for generating a pseudo address for said virtual device to communicate with the first device in the first network upon receiving a connection request from

Art Unit: 2157

the second device in the second network, and for outputting the pseudo address to said virtual-device-controller (col. 14, line 11 – col. 15, line 62); and

- (g) an address-correspondence-controller (the service controller 808) for controlling correspondence between the IP identifier and the pseudo address provided to said virtual device by said virtual-device-controller (col. 14, line 11 col. 15, line 62).
- 19. Regarding claim 7, Akatsu teaches a GW apparatus as defined in Claim 1 wherein said virtual device includes:
- (d-1) a connection controller for controlling a correspondence between the first device and the second device (col. 13, line 2 col. 14, line 54);
- (d-2) a command converter for converting a first command issued from the first network into a second command issued from the second network and vice versa (col. 7, line 50 60 and col. 10, line 6 line 65);
- (d-3) a command-correspondence-controller for controlling a correspondence between the first; anal the second commands (col. 12 line 16-56); and
- (d-4) an address converter for transferring a first message issued from the first network to the second network and vice versa (col. 13, line 2 col. 14, line 54).
- 20. Reference to claim 8, Akatsu discloses a method of gateway for communicating between a first device plugged-in a first network and a second device plugged-in a second network by using a virtual device; said method comprising:

Art Unit: 2157

- (a) transmitting and receiving a message to/from the first network (figure 5, col. 3, line 33 -57);
- (b) communicating with the second network following an internet protocol (IP) (figure 5, col. 3, line 33 57);
- (c) acquiring information about the first device by detecting a plug-in of the first device in the first network (col. 14, line 66 col. 15, line 8);
- (d) providing an IP identifier to the virtual device corresponding to the first device plugged-in responsive to the information acquired in step (c) for accessing to the virtual device from the second network (col. 14, line 11 col. 15, line 62);
- (e) upon receiving a connection request from the second device, the virtual device generates a pseudo address for communicating with the first device plugged-in (col. 14, line 11 col. 15, line 62); and
- (f) communicating between the first network and the second network responsive to the correspondence between the pseudo addresses provided to the virtual device and the IP identifier (col. 14, line 11 col. 15, line 62).
- 21. Since claim 14 has similar limitations to claim 7, it is rejected under the same rational.
- 22. Regarding claim 11, Akatsu disclose the method of gateway as defined in Claim 8 further comprising:
- (k) carrying out a stream transfer between the first devices of the first network (col. 10, line 1-63 and col. 18 lines 19-63);

Art Unit: 2157

- (1) storing a correspondence between an identifier of stream input/output plug of the first network and a stream port of the second network (col. 10, line 1 63 and col. 18 lines 19 63);
- (m) converting a stream packet of the first network to/from a stream packet of the second network, and transmitting/receiving the packet converted (col. 10, line 1-63 and col. 18 line 19 -63); and
- (n) establishing a stream connection to the second device plugged-in the second network, and holding a band when necessary (col. 10, line 1 63 and col. 18 line 19 63),

wherein said method carries out the stream transfer between the first network and the second network (col. 10, line 1 - 63 and col. 18 line 19 - 63).

Claim Rejections - 35 USC § 103

- 23. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 24. Claims 2-6, 9, 10, 12, and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Akatsu in view of Peter M. Corcoran "Mapping Home-Network Appliances to TCP/IP Sockets Using A Three-Tiered Gateway Architecture" (hereinafter Corcoran).
- 25. Regarding claim 2 Akatsu does not disclose (h) a second plug-in detector for detecting a plug-in of the second device by monitoring "a directory supplying information about the second

Art Unit: 2157

device in the second network". However, Akatsu discloses a first plug-in detector for plug-in of the first device in the first network (col. 14, line 66 – col. 15, line 8). It would have been obvious for a person having ordinary skill in the art at the time of the invention to add a second plug-in into the invention of Akatsu in order to allow the second network to manage it is devices and resource more effectively. Moreover, Akatsu does not disclose (i) a registry in the first network,

wherein said controller further acquires the information about the second device from the directory, and establishes a virtual device corresponding to the second device based on the information acquired,

wherein said GW apparatus allows the first device to detect the second device plugged-in the second network and acquires interface information via the registry.

However, these limitations are well known in the art as evidenced by Corcoran. Corcoran discloses (i) a registry in the first network (page 731, col. 1 and 2) wherein said controller further acquires the information about the second device from the directory, and establishes a virtual device corresponding to the second device based on the information acquired (page 731, col. 1 and 2),

wherein said GW apparatus allows the first device to detect the second device plugged-in the second network and acquires interface information via the registry (page 731, col. 1 and 2). It would have been obvious for one having ordinary skill in the art at the time of the invention to combine the teachings of Corcoran and Akatsu in order to enable the communication of the two devices in an efficient manner.

26. Since claim 9 has similar limitations to claim 2, it is rejected under the same rational.

Art Unit: 2157

27. Regarding claim 3, Akatsu does not teach (j) a directory register for registering information about the first device plugged-in to the directory of the second network,

wherein said first plug-in detector detects the plug-in of the first device by monitoring an event in the first network,

wherein said virtual-device-controller acquires information about the first device plugged-in the first network from a registry on the first network, and has said virtual device include a virtual device corresponding to the first device plugged-in based on the information acquired;

wherein said GW apparatus allows the second device to detect the first device plugged-in the first network via a registry on the second network.

However, Corcoran discloses (j) a directory register for registering information about the first device plugged-in to the directory of the second network (page 731, col. 1 and 2),

wherein said first plug-in detector detects the plug-in of the first device by monitoring an event in the first network (page 732, col. 1 and 2),

wherein said virtual-device-controller acquires information about the first device plugged-in the first network from a registry on the first network, and has said virtual device include a virtual device corresponding to the first device plugged-in based on the information acquired (page 734, col. 1 and 2);

wherein said GW apparatus allows the second device to detect the first device plugged-in the first network via a registry on the second network (page 734, col. 1 and 2).

Art Unit: 2157

It would have been obvious for one having ordinary skill in the art at the time of the invention to combine the teachings of Corcoran and Akatsu to enable the two networks to communicate with each other in an organized manner.

- 28. Since claim 10 has similar limitations to claim 2 and 3, it is rejected under the same rational.
- 29. Reference to claim 4, Akatsu discloses (k) a stream controller for controlling a stream transfer between the first devices on the first network (col. 10, line 1 63 and col. 18 line 19 63);
- (1) a stream-port-correspondence-controller for controlling correspondence between a stream input/output identifier on the first network and a stream port on the second network (col. 10, line 1-63 and col. 18 line 19-63);
- (m) a stream packet converter for converting a stream packet on the first network to a stream packet on the second network and vice versa, and sends/receives thereof (col. 10, line 1-63 and col. 18 line 19-63),

wherein said virtual device establishes a stream connection to the second device pluggedin the second network, and has a stream generator for holding a band when necessary (col. 10, line 1-63 and col. 18 line 19-63),

wherein said GW apparatus transfers a stream between a device on the first network and a device on the second network (col. 10, line 1 - 63 and col. 18 line 19 - 63).

Art Unit: 2157

30. Regarding claim 5, Akatsu does not disclose (o) an information acquirer for acquiring information necessary for forming a user interface;

- (p) a user interface (UI) generator for generating a UI to be used on the second network based on the information acquired; and
- (q) a UI provider for transferring the UI generated when the second device requests to access to the first network,

wherein said controller detects a plug-in of a device to the first network, and determines whether or not the device plugged-in supports a protocol on the first network, anal when said controller determines the protocol is supported, said information acquirer acquires necessary information for forming the UI by communicating with the device,

wherein said GW apparatus allows the second device on the second network to display the UI for manipulating the first device on the first network.

However, Corcoran discloses (o) an information acquirer for acquiring information necessary for forming a user interface (page 733 –734);

- (p) a user interface (UI) generator for generating a UI to be used on the second network based on the information acquired (page 733 –734); and
- (q) a UI provider for transferring the UI generated when the second device requests to access to the first network (page 733 -734),

wherein said controller detects a plug-in of a device to the first network, and determines whether or not the device plugged-in supports a protocol on the first network, anal when said controller determines the protocol is supported, said information acquirer acquires necessary information for forming the UI by communicating with the device (page 733 –734),

Art Unit: 2157

wherein said GW apparatus allows the second device on the second network to display the UI for manipulating the first device on the first network (page 733 –734).

It would have been obvious for one having ordinary skill in the art at the time of the invention to combine the teachings of Corcoran and Akatsu to allow the two devices to display information on a UI.

- 31. Claim 12 has similar limitations as claim 5, thus it is rejected under the same rational.
- Regarding claim 6, Akatsu does not disclose (r) a registry of the first network;
- (s) a downloader for downloading necessary information to said virtual device by accessing to an information-provider- site providing information about said virtual device;

wherein said virtual-device-controller detects a plug-in of the first device, searches the registry for information about the first device plugged-in, and acquires the information,

wherein said controller further includes an information acquirer for acquiring the information from the provider site based on the device information acquired from the registry when said controller determines one of two cases; (i) other cases than a case where said virtual device includes a virtual device corresponding to one of the first device plugged-in and the second device plugged-in, and (ii) a case where said controller determines that said virtual device needs to update a software version thereof.

However, Corcoran discloses (r) a registry of the first network (page 731, col. 1 and 2). It would have been obvious for one having ordinary skill in the art at the time of the invention to implement a registry of Corcoran into the invention of Akatsu to reduce processing time by

Page 15

Application/Control Number: 09/603,698

Art Unit: 2157

allowing the device to be registered in a registry. Nonetheless, Corcoran does not disclose the remaining limitations of this claim. However, it would have been obvious for one having ordinary skill in the art at the time of the invention to include an information provider site for providing virtual controller to detect plug-in associated with virtual devices and to determine device plug-in and updated software into Corcoran and Akatsu because it would keep the virtual

Since claim 13 has similar limitation to claim 6, it is rejected under the same rational. 33.

Conclusion

- The prior art made of record and not relied upon is considered pertinent to applicant's 34. disclosure.
 - U.S. Pat. No. 6,523,696 to Saito et al.
 - U.S. Pat. No. 6,079,020 to Liu

device more up to date and to operate effectively.

- U.S. Pat. No. 6,584,096 to Allan
- Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sahera Halim whose telephone number is (703) 305-8054. The 35. examiner can normally be reached on M-F from 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ario Etienne can be reached on (703) 308-7562. The fax phone numbers for the
